SUMMARY

Software engineer with hands-on experience in Java, Python, and full-stack development, building scalable and user-focused applications. Collaborative Agile team contributor with a passion for solving real-world problems and continuously expanding my skills.

EDUCATION

B.S.E., Software Engineering May 2026
Arizona State University, Tempe, AZ 3.88 GPA
Relevant Coursework: Data Structures & Algorithms, Secure Software Systems, Web-Based Applications, Operating Systems

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript, C, C++, C#, HTML/CSS
Frameworks & Libraries: React, Node.js, JavaFX, Swing, Tkinter, Streamlit
Databases: MongoDB Atlas, MySQL, SQL (query writing, joins), JSON-based data persistence
Tools & Build Systems: Git/GitHub, Gradle, YAML prompt configuration, Figma, Astah, Lucidchart, Taiga
Back-End & APIs: REST APIs, LLM prompt engineering, multi-step reasoning pipelines
Operating Systems: Windows, macOS, Linux
Additional: Troubleshooting, debugging, version control (Git), object-oriented backend design, Arduino (sensor integration), MIPS Assembly, video editing for demos

PROFESSIONAL EXPERIENCE

Self-Learning AI Tutor—Capstone Project (Sponsored by MyEdMaster LLC) Aug 2025 – Present

- Designing and implementing an adaptive learning algorithm using Python, Streamlit, and MongoDB to dynamically select questions based on student performance
- Developing and maintaining unit and integration tests (pytest), improving test coverage and overall system reliability
- Building new features, i.e. a crash course module, and enhancing current features, like separating student responses into structured expression and reasoning components for later analysis
- Collaborating in a fully remote Agile Scrum team, participating in sprint planning, stand-ups, and code reviews to deliver iterative features

PROJECTS

GPS Distance App, *Personal Project* Sep 2025 – Dec 2025

- Built CLI and JavaFX GUI applications for geospatial distance and travel-time calculations using the haversine formula
- Integrated a Mapbox API and embedded dynamic HTML maps into JavaFX, debugging API and UI rendering issues to ensure accurate visualization
- Designed intuitive route creation and selection workflows and automated builds using Gradle

Memoranda Software to Bus Scheduler Transformation, *Class Project* Jan 2025 – Mar 2025

- Extended a legacy Java codebase within a Scrum team to support new bus routing functionality, adapting existing architecture to meet evolving client needs
- Implemented backend routing logic and contributed to a GPS-based mapping UI, refactoring fragile components to improve system stability and usability

Image Filter Processor, *Class Project* Oct 2024 – Dec 2024

- Implemented a pixel-by-pixel BMP image processing pipeline in C, requiring careful memory management and low-level data handling
- Parallelized image filtering using pthreads, optimizing thread coordination and reconstruction logic to improve performance without corrupting image output

WORK EXPERIENCE

UCHealth, Remote: Contact Center Representative April 2026 – Present

- Operating within a high-volume, system-driven environment to triage requests, maintain data integrity, and optimize workflows, demonstrating strong problem-solving and user-focused thinking.

Starbucks, Loveland, CO: Barista May 2018 – April 2026

- Experience in a high-volume retail environment, collaborating with team members, resolving customer issues under pressure, mentoring 10+ new hires, leading peak shifts, and earning *Partner of the Quarter* recognition
